■ *Il viaggio del Capitano Sans*  
 Minutino legge, e applaude.  
 Legge le note, e gli occhi s'innalza  
 Con una lagrimosa compiacenza.  
 Altra volta s'innalza già di lì, e proclama:  
 Dio l'abbia con costui di Teano e di Rieti (c).  
 Furore, e pianto, Oh, mamma, oh mamma.  
 ■ *Ma che, non è lui che non sono morto?*  
 Ma è questo il suo secondo fratello.  
 Gli risponde di lontano, lontano, l'aria.

the 1990s, the number of people who have been infected with HIV has increased significantly. In 1990, there were approximately 1.5 million people living with HIV worldwide. By 2000, this number had risen to over 40 million. The increase in the number of people living with HIV is due to a combination of factors, including the spread of the virus through sexual contact, blood transfusions, and mother-to-child transmission. The impact of HIV on the global population is significant, as it has led to the deaths of millions of people and the development of AIDS, a life-threatening condition. The World Health Organization (WHO) estimates that over 25 million people have died from AIDS since it was first identified in the early 1980s. The WHO also reports that over 30 million people are currently living with HIV, with the highest prevalence rates found in sub-Saharan Africa. The impact of HIV on the global population is a major public health concern, and it is essential that we continue to research and develop effective treatments and prevention strategies.

5.67 *Henry Villalpando* (ca. 1580-1640) *Interior of the Temple of Solomon*, 1628. Engraving. 16.5 x 22.5 cm. The engraving depicts the interior of the Temple of Solomon, showing the large central hall (the nave) and the side aisles. The architecture is characterized by a series of columns supporting a high, vaulted ceiling. The perspective is from the entrance, looking down the length of the temple. The engraving is a detailed study of classical architecture, reflecting Villalpando's interest in the geometry and proportions of ancient buildings.

the three major cities were placed in blocks by a policy known as "block rezoning." Block rezoning consisted of rezoning large blocks of cities, including the three problem cities. The block rezoning process was initiated by the city council and the city manager. The process
